Watch this ~~Cat~~ Car Video on Youtube

https://youtu.be/7wm-pZp_mi0

What just happened?

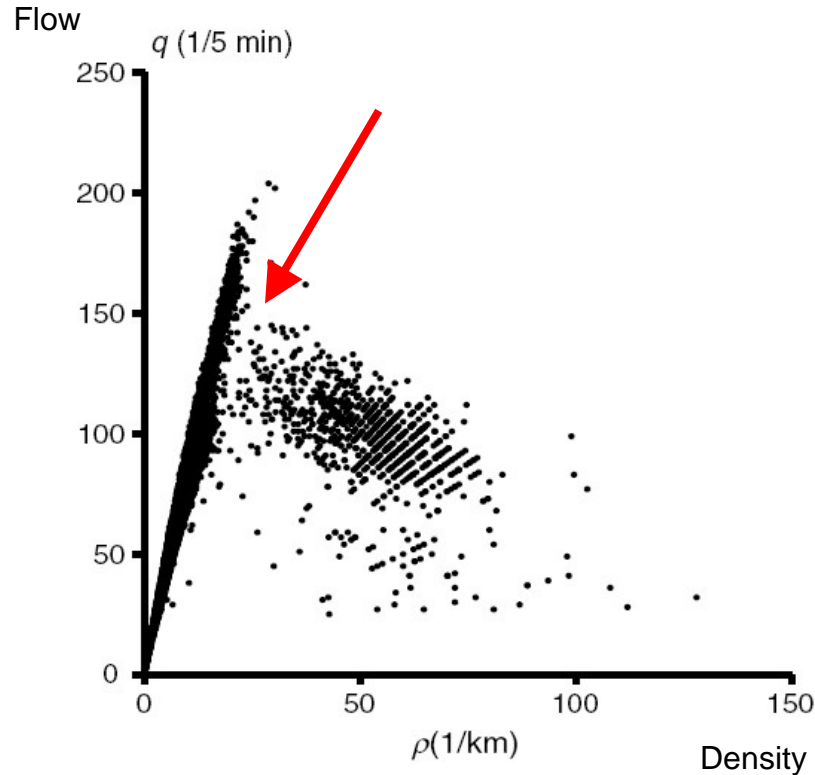

“Flow Breakdown”

Critical Density

Uncongested \leftrightarrow Congested

Turbulence reaches critical level
and breaks down traffic

Sugiyama, Yuki, et al. "Traffic jams without bottlenecks—experimental evidence for the physical mechanism of the formation of a jam." *New Journal of Physics* 10.3 (2008): 033001.

“Flow Breakdown”

Critical Density

Sugiyama, Yuki, et al. "Traffic jams without bottlenecks—experimental evidence for the physical mechanism of the formation of a jam." *New Journal of Physics* 10.3 (2008): 033001.

Can we do it on a webpage?

Let's draw a track...

... and some cars!

... and some cars!

... and some cars!

3, 2, 1, Go!!

High school physics

$$x = x_0 + v * t$$

$$v = v_0 + a * t$$

High school physics

$$x = x_0 + v * t$$

$$v = v_0 + a * t$$

High school physics

$$x = x_0 + v * t$$

$$v = v_0 + a * t$$

a - acceleration

How do we determine it?

a - acceleration

How do we determine it ?!

Car Following Model

Define how vehicles interact with each other

How car “follows”

Goal: Avoid Collision

... and how car not follow

Goal: Drive at desired speed

...and then there is
micro-simulation

W99 Car Following Model

Wiedemann's Car Following Models

Vissim's ~~favorite~~ car following model

“Psycho-Physical” Model

“Psycho-Physical” Model

Acceleration/Free Driving

Speed not constrained by other vehicles

Following

Maintain speed and distance with leader

Deceleration

Approaching slower vehicle

Emergency Deceleration

To avoid collision

W99 Car Following Model - Parameters

AX – stationary distance

BX – min following distance

CLDV – perception threshold (near): speed higher than leader

SDV – perception threshold (far): speed higher than leader

OPDV – perception threshold: speed lower than leader

SDX – perception threshold: free acceleration

W99 Car Following Model - Parameters

- cc0 – standstill distance
- cc1 – headway time
- cc2 – following variation
- cc3 – threshold for entering “following”
- cc4 – negative “following” threshold
- cc5 – positive “following” threshold
- cc6 – speed dependency of oscillation
- cc7 – oscillation acceleration
- cc8 – standstill acceleration
- cc9 – acceleration at 80 km/h
